

IN-OFFICE 3-D IMAGING

For accurate diagnoses & precise orthodontic treatment planning.

The cornerstone of successful orthodontic treatment is an accurate treatment plan. Puntillo Orthodontics is proud to offer in-office cone beam 3-D imaging (CBCT) to help provide important visual information that is used when developing your individualized orthodontic treatment plan. CBCT, along with Dr. Puntillo's and Dr. Crane's complete knowledge of tooth movement and the entire dentofacial system, can help produce the optimum results you desire.

The ultimate in orthodontic treatment planning.

CBCT provides high-definition, three-dimensional images of the hard and soft facial tissues and structures. Every aspect of the face, teeth and gums can be evaluated with unsurpassed clarity and unlike anything conventional X-rays produce. CBCT helps us determine exact tooth location and the proximity of adjacent teeth and other vital structures (e.g., nerve canals). You will be glad to know that you or your child's CBCT scan is extremely efficient and safe. You sit upright in an open environment, and the scan takes between 15 and 20 seconds.

To learn more about CBCT or the many orthodontic services available from Puntillo Orthodontics, call 219.662.2264 and schedule your complimentary orthodontic exam and digital X-rays today!
