

SURESMILE® DIGITAL ORTHODONTIC SYSTEM

Straighter smiles with less discomfort, shorter treatment times & fewer office visits.

With your busy life, you don't want to make countless trips to the orthodontist.

Thanks to the revolutionary SureSmile digital orthodontic system, you don't have to. It reduces the number of wire changes and adjustments. This means fewer office visits and less discomfort throughout your treatment. In fact, clinical research indicates SureSmile can reduce treatment time by up to 40% compared to conventional braces. That means you'll be showing off your beautiful new smile sooner than you ever thought possible. Puntillo Orthodontics has stayed at the forefront of the latest orthodontic advances, and we are proud to offer SureSmile.

A technology-driven orthodontic process.

With SureSmile, 3-D images of your teeth are taken using the hand-held SureSmile OraScanner®, which functions like a video camera. Sophisticated 3-D treatment planning software is then used to build a virtual model of your teeth. Dr. Puntillo and Dr. Crane use this information to plot individual tooth movements throughout the course of your SureSmile treatment. 3-D "mapping" of tooth movement allows for a more efficient bracket and archwire system to be designed. Once your computerized treatment plan is complete, it is sent to the SureSmile Service Center for your customized archwires.

SureSmile uses state-of-the-art robotic technology to fabricate your "shape-memory alloy" archwires based on the detailed requirements of your individual treatment plan. These "smart" wires, which permanently retain their custom bends, are made from the most effective materials used in orthodontics today. This results in your teeth being moved to the desired positions more directly, reducing treatment time.
